

PREMIUM[®] FISH

PROTEIN CLARIFIER

CHIARIFICANTI

COMPOSITION

Pure fish gelatine isinglass.

CHARACTERISTICS

PREMIUM FISH is an animal gelatine with a high protein nitrogen content; it is in a granular odourless form, in clear flakes; it does not contain preservatives.

It dissolves completely in cold water and forms a slightly opalescent solution.

PREMIUM FISH is guaranteed to be produced from raw material not from genetically modified organisms (OGM free), is free from BSE risk and the processing procedures are in compliance with Kosher rules.

APPLICATIONS

PREMIUM FISH is characterized by a very high surface electrical charge (1:10 meq/g); equal to the best animal gelatines selected by our Research and Development department to date.

This means PREMIUM FISH has a quick clarifying effect and a high capacity to combine with polyphenols; it can be used as a tannin remover.

Therefore PREMIUM FISH is used to effectively clarify the colloids that plug filtering mediums, primarily for whites or when you want to correct the total polyphenol content.

Treatments of reds which cannot be filtered much, must be conducted with very limited doses.

Clarification treatments are also possible with cold wines.

PREMIUM FISH is successfully used for clarification processes of grape must and fruit juices.

PREMIUM FISH must be used in compliance with applicable regulations.

DIRECTIONS

Dissolve PREMIUM FISH in cold water with a 1:20 ratio. Higher concentrations (e.g.: 1:10) are possible, but the solution becomes much more gelatinous.

The aqueous solution cannot be stored and must be used in the same day.

Add directly to the wine to be treated.

Subsequent treatment with PLUSGRAN V is recommended, if positive protein stability is required, particularly when used with white wines.

DOSAGE

2 to 15 g/hL on musts to be clarified (even floating).

2 to 10 g/hL in wines to improve their filterability, higher doses for harder to clarify wines.

To avoid surcollage phenomena, it is advisable to perform some clarification lab trials with decreasing doses of PREMIUM FISH.

PACKAGING

0.5 kg laminated bags.

STORAGE

Store in a cool, dry place. Tightly close opened packages.

WARNING

The compound is classified: not hazardous.
